SUMMARY

Motivated Computer Science undergraduate with hands-on experience in backend and full-stack development. Skilled in building real-time, scalable systems using GoLang, TypeScript, Docker, and modern cloud-native tools. Passionate about distributed systems, microservices, and performance optimization.

EDUCATION

MIT Maharashtra

Bachelor in Computer Science

Pune, India

Aug 2022 – July 2025

MIT Maharashtra

Master of Science in Data Science

Pune, India

Aug 2025 – July 2027

EXPERIENCE

AscendSoft Pte Ltd

Fullstack Developer (Remote)

June 2025 – Aug 2025

- Contributed to the development of **eMediHub**, a healthcare platform focused on streamlining doctor onboarding, verification, and management for a fast-paced remote startup.
- Built **90%** of backend microservices using Node.js, following a scalable and modular architecture that supported rapid iteration across multiple product features.
- Developed **80%** of frontend interfaces spanning React.js (web) and Flutter (mobile), ensuring a consistent, seamless cross-platform user experience.
- Integrated real-time status updates and doctor verification workflows using RESTful APIs, reducing manual verification turnaround time.
- Improved overall platform efficiency by **60%** through targeted automation of repetitive workflows and backend performance tuning.
- Collaborated closely with a distributed, cross-functional team to ship features quickly while maintaining strong security and code-quality standards.
- Participated in code reviews, sprint planning, and agile ceremonies to align on priorities and unblock teammates across time zones.

Kavita Metal

Freelance Developer

June 2025 – Present

- Engineered a scalable e-commerce solution end-to-end using modern web tools, increasing customer engagement and reducing manual catalog-management effort by **50%**.
- Integrated secure user authentication and real-time product/inventory updates, enhancing customer trust and overall shopping experience.
- Designed the product catalog and order-management workflows to be easily maintainable by non-technical staff, cutting down onboarding time for new catalog updates.
- Worked directly with the client to gather requirements, iterate on UI/UX, and deploy updates with minimal downtime.

PROJECTS

Microservices E-commerce Platform | GoLang, Gin, PostgreSQL, sqlc, Docker, gRPC, GraphQL, Redis, JWT

- Designed and implemented a scalable e-commerce platform following microservices architecture to deepen understanding of distributed systems and service-oriented design.
- Decomposed a monolithic application into independent services communicating over gRPC, containerized with Docker for improved scalability and deployment agility.
- Exposed a unified GraphQL API gateway in front of underlying services, simplifying client-side data fetching across the platform.

- Integrated Redis-based caching and JWT-based authentication, achieving a **60%** improvement in response times alongside secure, stateless access control.

PANGAT | *Next.js, TypeScript, Tailwind CSS, Shadcn UI, GoLang, Gin, Socket.IO, WebRTC*

- Built a real-time communication platform supporting video/audio calls and chat with WebRTC and Socket.IO, enabling seamless multi-user interaction.
- Designed the Go/Gin backend to handle signaling and session management for WebRTC peer connections at low latency.
- Built a responsive, accessible UI with Next.js, TypeScript, Tailwind CSS, and Shadcn UI components for a polished user experience.
- Optimized client-server communication for low-latency updates, achieving sub-200ms chat/message delivery.

Blogging Web | *Next.js, TypeScript, Tailwind CSS, Node.js, Hono.js, NPM, Prisma ORM, JWT, GitHub, Cloudflare*

- Developed a feature-rich blog platform with autosave, Markdown support, and role-based access control for authors, editors, and admins.
- Built a lightweight, high-performance backend with Hono.js and Prisma ORM, exposing JWT-secured REST endpoints for content management.
- Used Cloudflare for DDoS protection and CDN acceleration, improving uptime and global performance for readers worldwide.

CERTIFICATIONS

Backend Master Class

2025

GoLang, Postgres, Kubernetes, gRPC | Tech School (Udemy)

- Built a production-style banking backend in Go, covering RESTful API design, database transactions, and unit/integration testing.
- Implemented gRPC services and API gateway patterns alongside RESTful endpoints, learning protocol buffer schema design and service communication.
- Deployed containerized services to Kubernetes, covering CI/CD pipelines, secrets management, and rolling updates on AWS infrastructure.
- Practiced database migration, indexing, and query optimization techniques using PostgreSQL and sqlc for type-safe SQL.

Fullstack Development Cohort 2

2025

MERN Stack, System Design | 100xDevs

- Completed an intensive fullstack curriculum covering React.js, Node.js, Express, and MongoDB alongside TypeScript fundamentals.
- Studied system design principles including load balancing, caching, database sharding, and scalable backend architecture.
- Gained hands-on experience with Docker, CI/CD workflows, and cloud deployment (AWS) as part of the DevOps track.
- Built multiple production-grade projects applying authentication, payment integration, and real-time features (WebSockets).

TECHNICAL SKILLS

Languages: Python, SQL, GoLang, TypeScript, JavaScript

Generative AI / LLM: LangChain, LangGraph, ChromaDB, RAG Pipelines, Multi-Agent Systems, Prompt Engineering, OpenAI API

Data & ML: Pandas, NumPy, Scikit-Learn, ARIMA, Linear Regression, EDA, Feature Engineering, Time-Series Forecasting, Matplotlib, Seaborn

Deep Learning: TensorFlow, Keras, CNN, Image Classification

MLOps, Cloud & Tools: Model Deployment, CI/CD for ML, AWS/Azure, Git, GitHub, Docker, Jupyter Notebook, Vercel, Agile/Scrum

Web, Backend & Databases: React JS, Next.js, Node.js, Express.js, FastAPI, Flutter, Dart, REST APIs, PostgreSQL, Redis, SQL
